

Main Salon

Two (2) Todd Captain's chairs on pedestals. One chair has two posts; one for use underway and a shorter one while in a slip or at anchor. Provides an extra chair when needed.

Two Lane loungers. This flexible seating allows changes according to needs.

Navigation/chart table built in on port side with storage underneath.

Icom 810 R SSB radio

Epirb 406 mounted on wall by helmsman.

Icom VHF and radio/cd player mounted above helm station

Two Bose speakers with remote speakers below down in forward berth

Instrumentation panel, electrical/battery panels and control for anchor windlass as well as engine controls are located within helmsman's reach.

TV with folding mount above stairs to below. (TV can then also be used as a large monitor if navigating with attached laptop using electronic charts and gps.) This arrangement was what we used.

Four sliding doors (trimmed in teak) give ample access to the stern and either side of vessel. Very handy when docking or going through a series of locks on The Loop, etc.

Engine Room

Accessed from main cabin sole and from behind the stairs in the galley area. This is where we usually enter the engine room.

Perkins 4-236

Heart 2000 watt Inverter/100 amp Battery Charger

4 house batteries Group 31

1 starting battery

6-gallon Water Heater, 110 volt/ engine heated as well

PUR 80 watermaker w/ filters and cleaning supplies

We have not used this unit since installation so we cannot verify its condition. We had it previously on our sailboat and used it in the Bahamas.

Racor Duel Diesel Fuel Filter and Water Separator

Inline filter on water from dockside spicket.

7.5 kw Onan Diesel Generator

Does not work. Parts are no longer available new from manufacturer.

We have left in in place for ballast; otherwise, boat would list.

We rely on our Honda 2000 generator when needed. The Honda is sufficient for everything except running the air conditioners. Owner preference...

Rule automatic bilge pump under engine

Two (2) Reverse-cycle Heat Pumps, 16 and 9 btu's

Schucker's 'back porch'

Propane locker for two 20-lb aluminum tanks. There is a remote shut-off as well in the galley.

Huge storage locker.

Dinghy motor mount: Included is a SS Garhauer Dinghy Motor Lift.

It attaches to the swim platform. Very handy when lowering/lifting the 15 hp Yamaha outboard.

Equipment In addition to any of the mentioned items, we are selling the boat with those items which we found useful in our cruising. Please check out my blog posts, especially the site page listed as “Sandpiper’s Equipment...Spring Cleaning” <https://www.schucker436.com>

West Marine Inflatable Dinghy 10’2”

A 2005 inflatable dinghy with an aluminum floor, reducing the weight of the dinghy considerably. The dinghy has been stored inside a building and undercover when not in use. I would then consider the condition as *excellent*.

15 hp Yamaha outboard

Honda 2000 portable generator

Simpson Lawrence Windlass with switch at helm station and hand-held remote.

Hood Roller Furling

Three (3) solar panels, 75 watts each, mounted on “roof”

Air Marine Wind Generator w/ switch in main salon

Complete set of window covers and mainsail cover (navy blue). In addition, a large roll of Phivertex(sp) to be made into additional window covers, but will provide shading and visibility when underway or docked (gray). Enough was ordered to also make a large “shade screen” that could be attached to the coach roof and slid around depending where the sun is. Fitting bolt rope is also included.
Project??

Sails

Mainsail and a genoa, not new, purchased from another Schucker owner. Quite useable, but genoa needs new sun shield.

Anchors 60 lb CQR w/ 5/16” High Tinsel chain

45 lb CQR w/ 60’ chain and 200’ nylon rode

FX 16 aluminum anchor (often on a stern mount for “just in case...”)

FX 22 aluminum anchor (stored below for the ultimate “just in case...”)

While we believe our descriptions are accurate, we cannot guarantee them.
